

# Kavan Modi

# Enhancement in Quantum Metrology

Hugo Cable

Mark Williamson

Vlatko Vedral

# Metrology

science of (precision) measurement.

# Quantum

anything we do not call classical.

# Quantum

anything we do not call classical.

superposition?

# Quantum

anything we do not call classical.

superposition?

entanglement?

# Quantum

anything we do not call classical.

superposition?

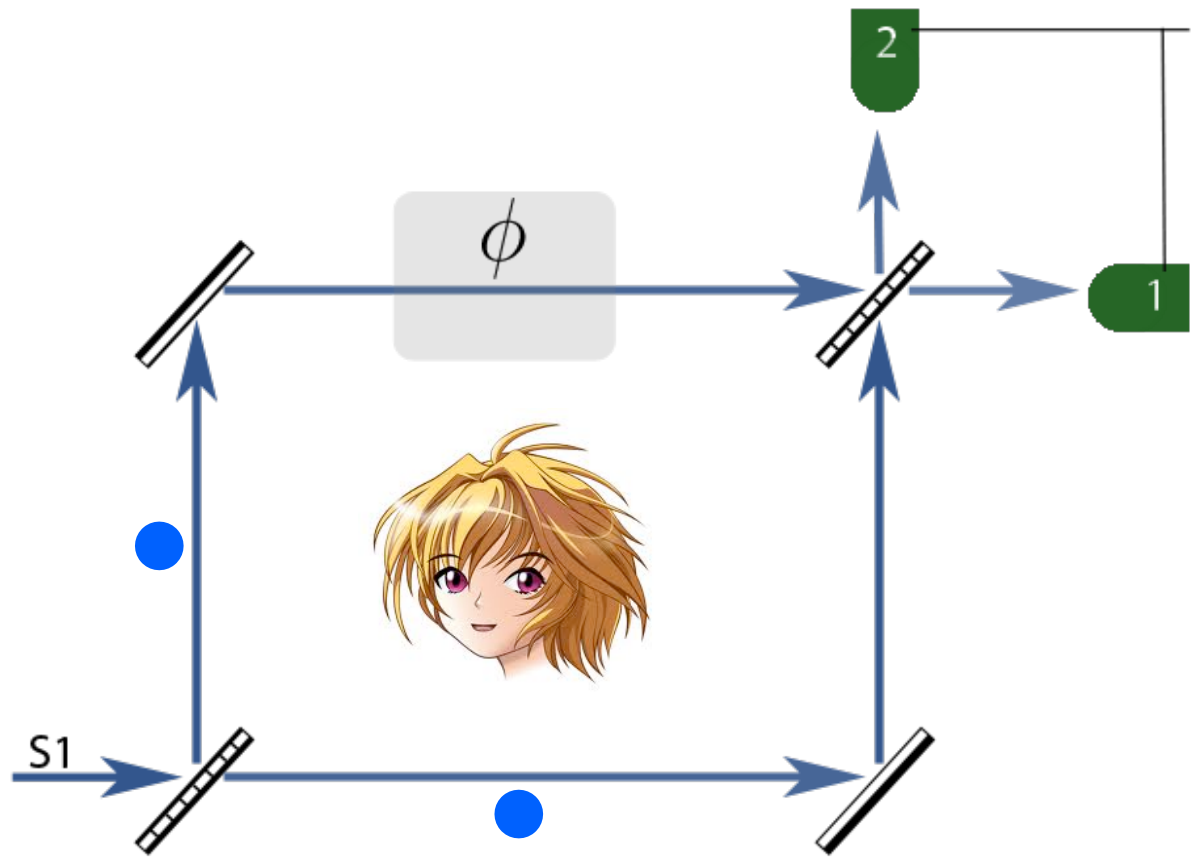

entanglement?

discordant?

What do we mean by  
quantum discord?

# Metrology

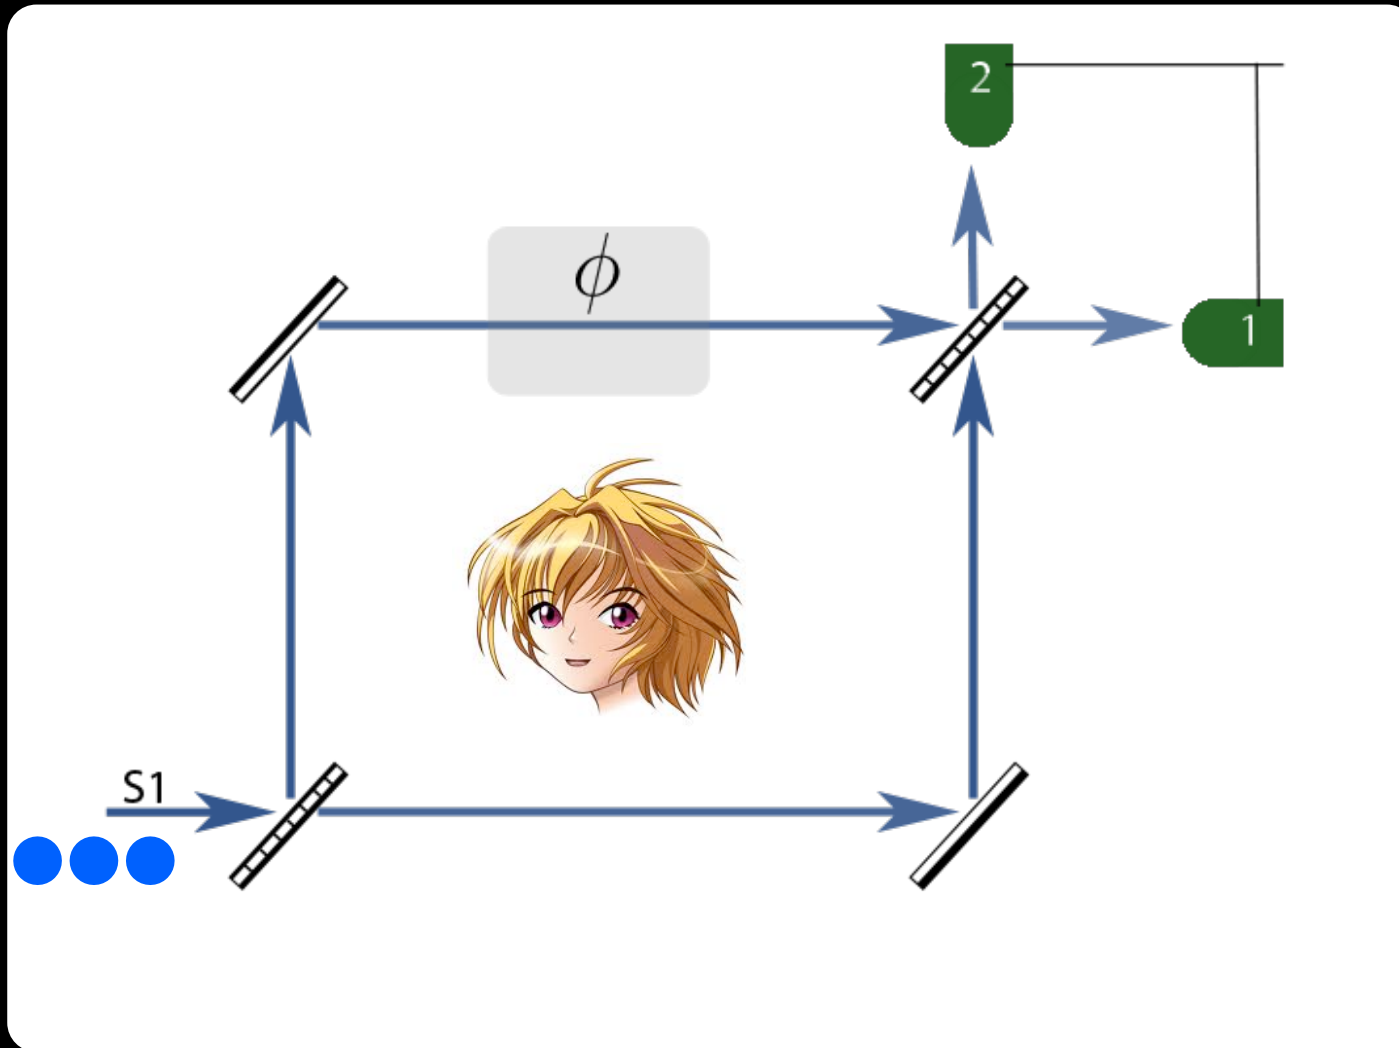

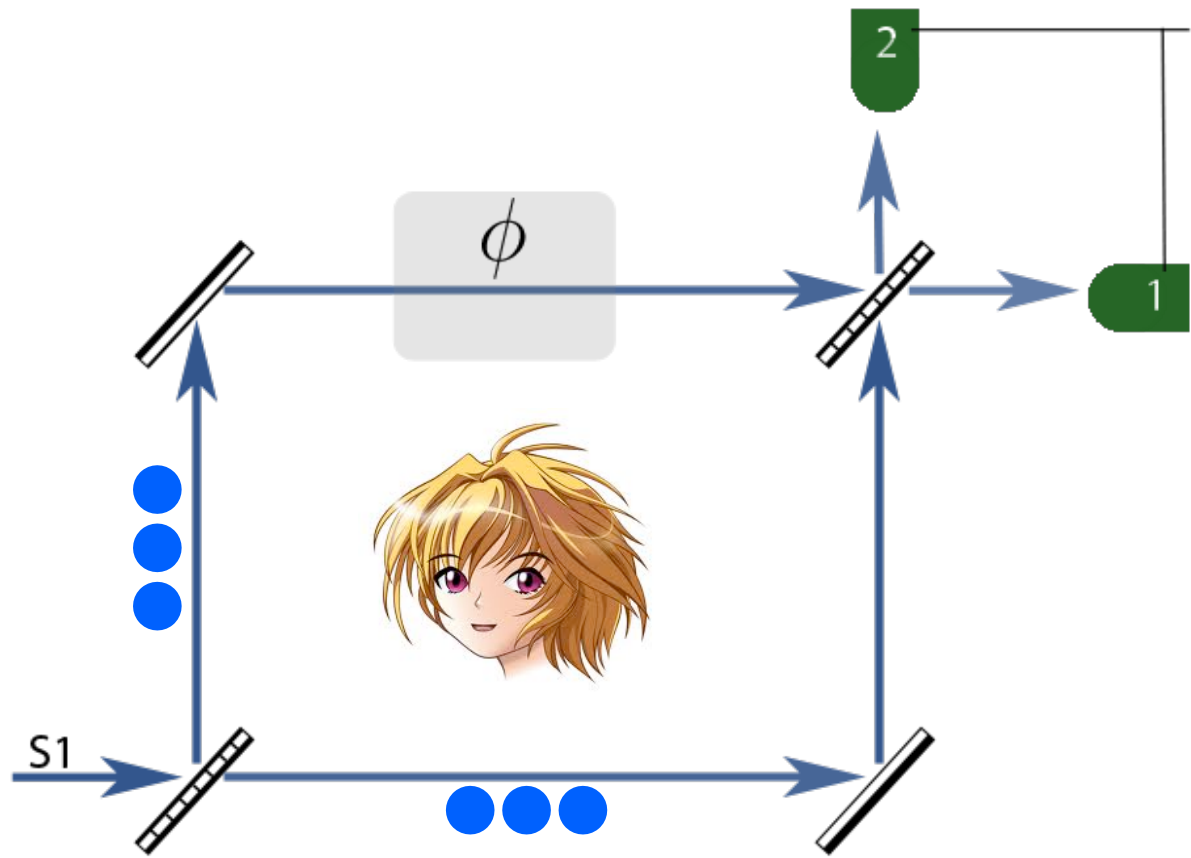

$\Delta\phi$

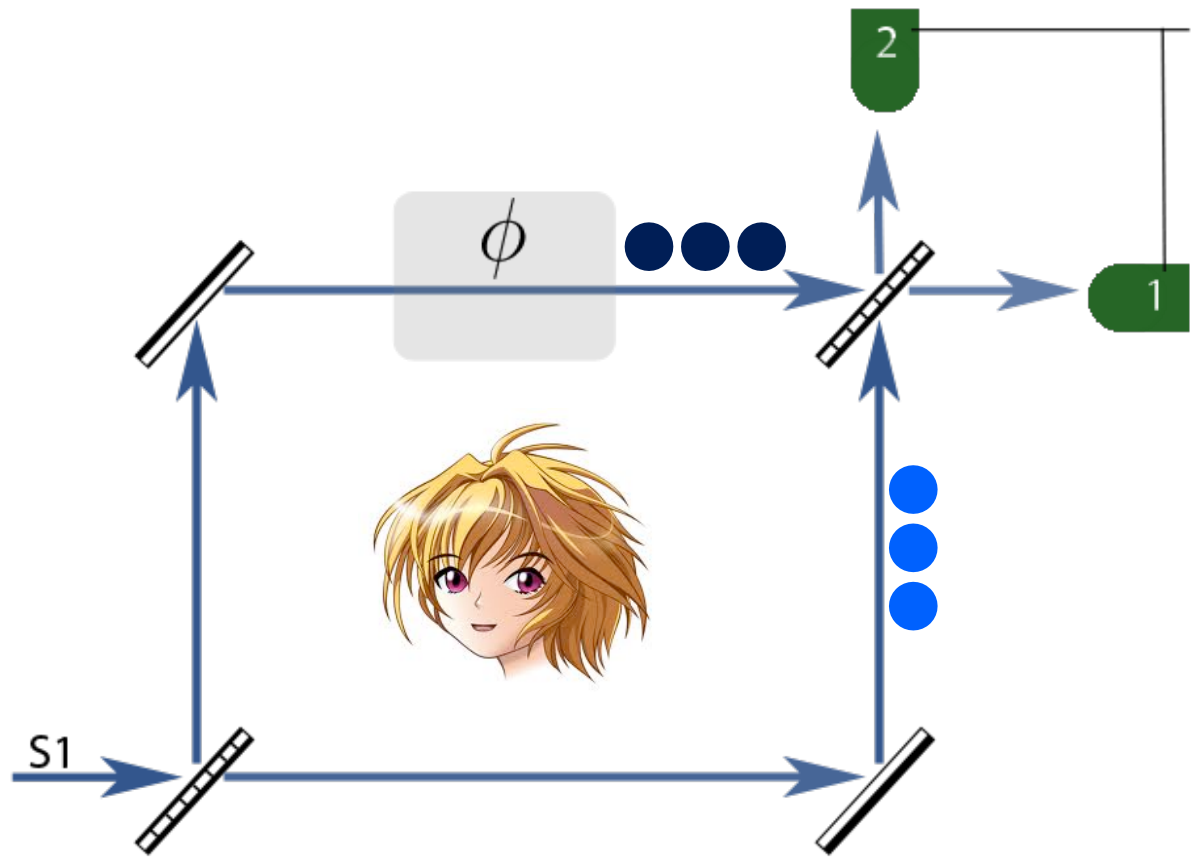

is

$$\frac{1}{\sqrt{N}}$$

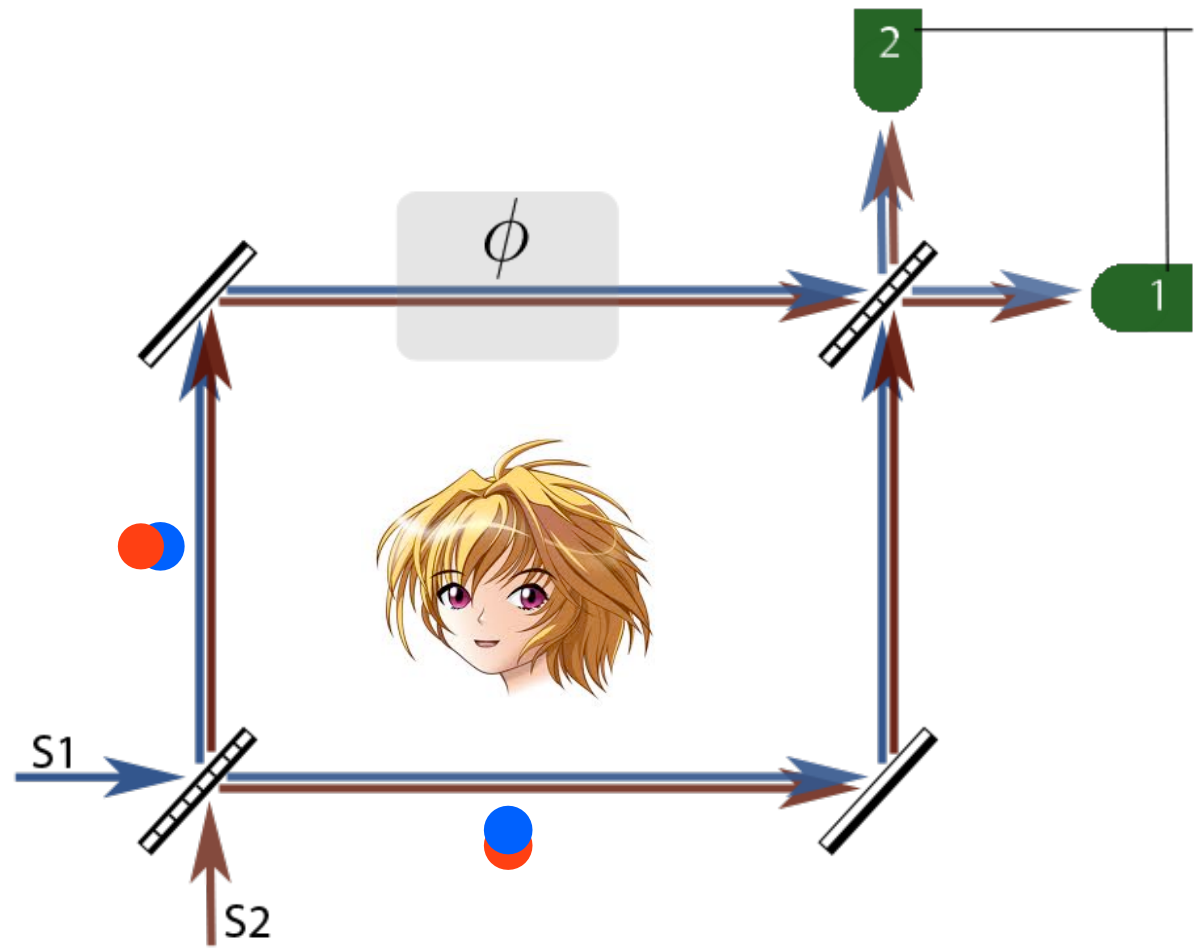

$\Delta\phi$

is

$$\frac{1}{N}$$

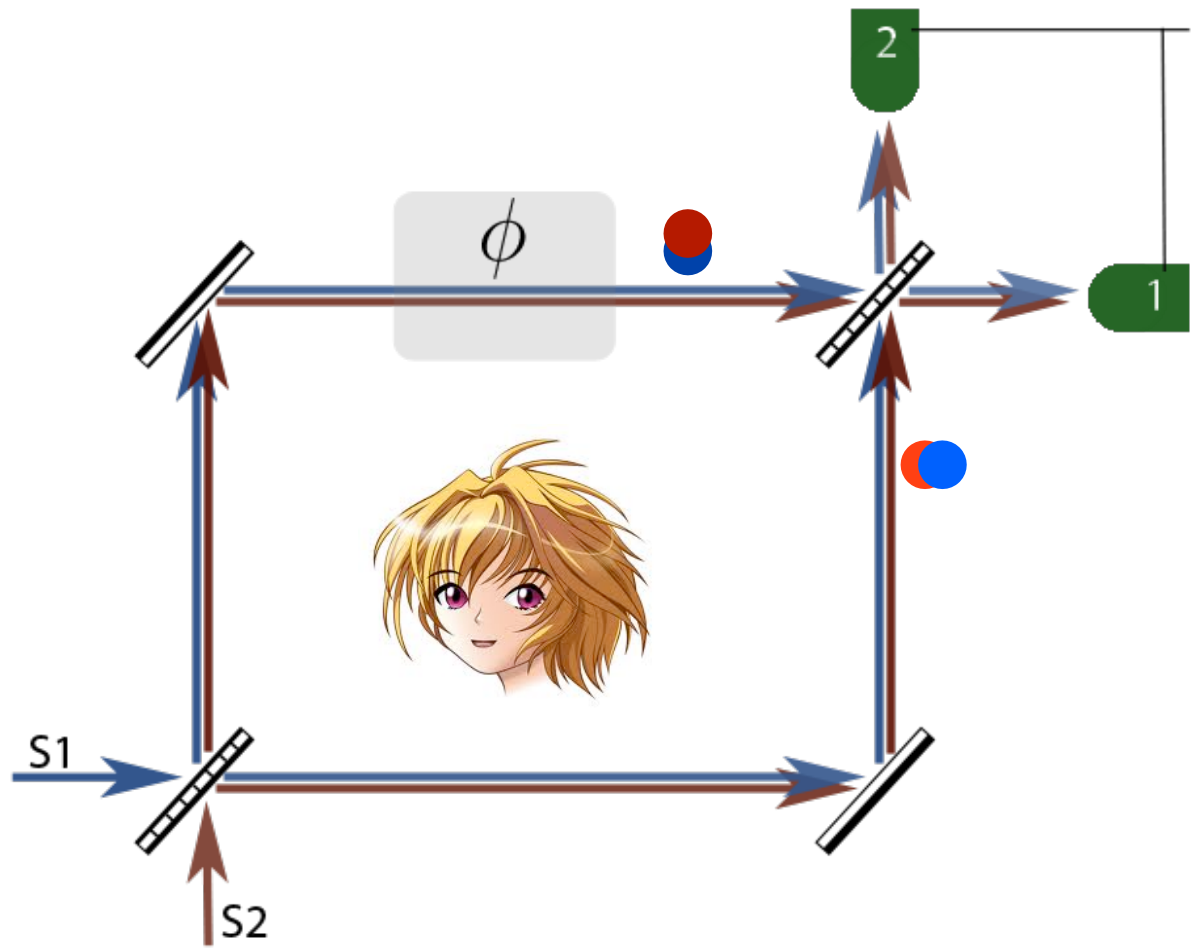

Mixed states

$\Delta\phi$

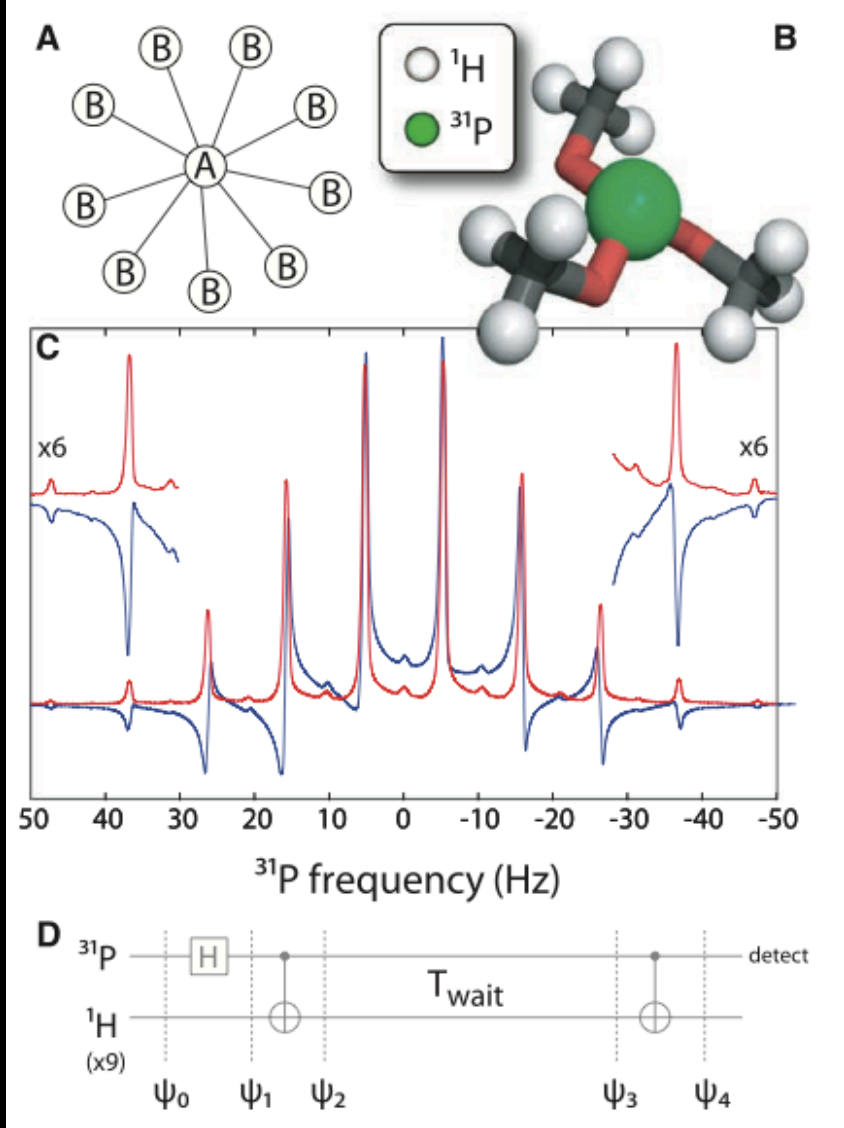

is

$$\frac{1}{p\sqrt{N}}$$

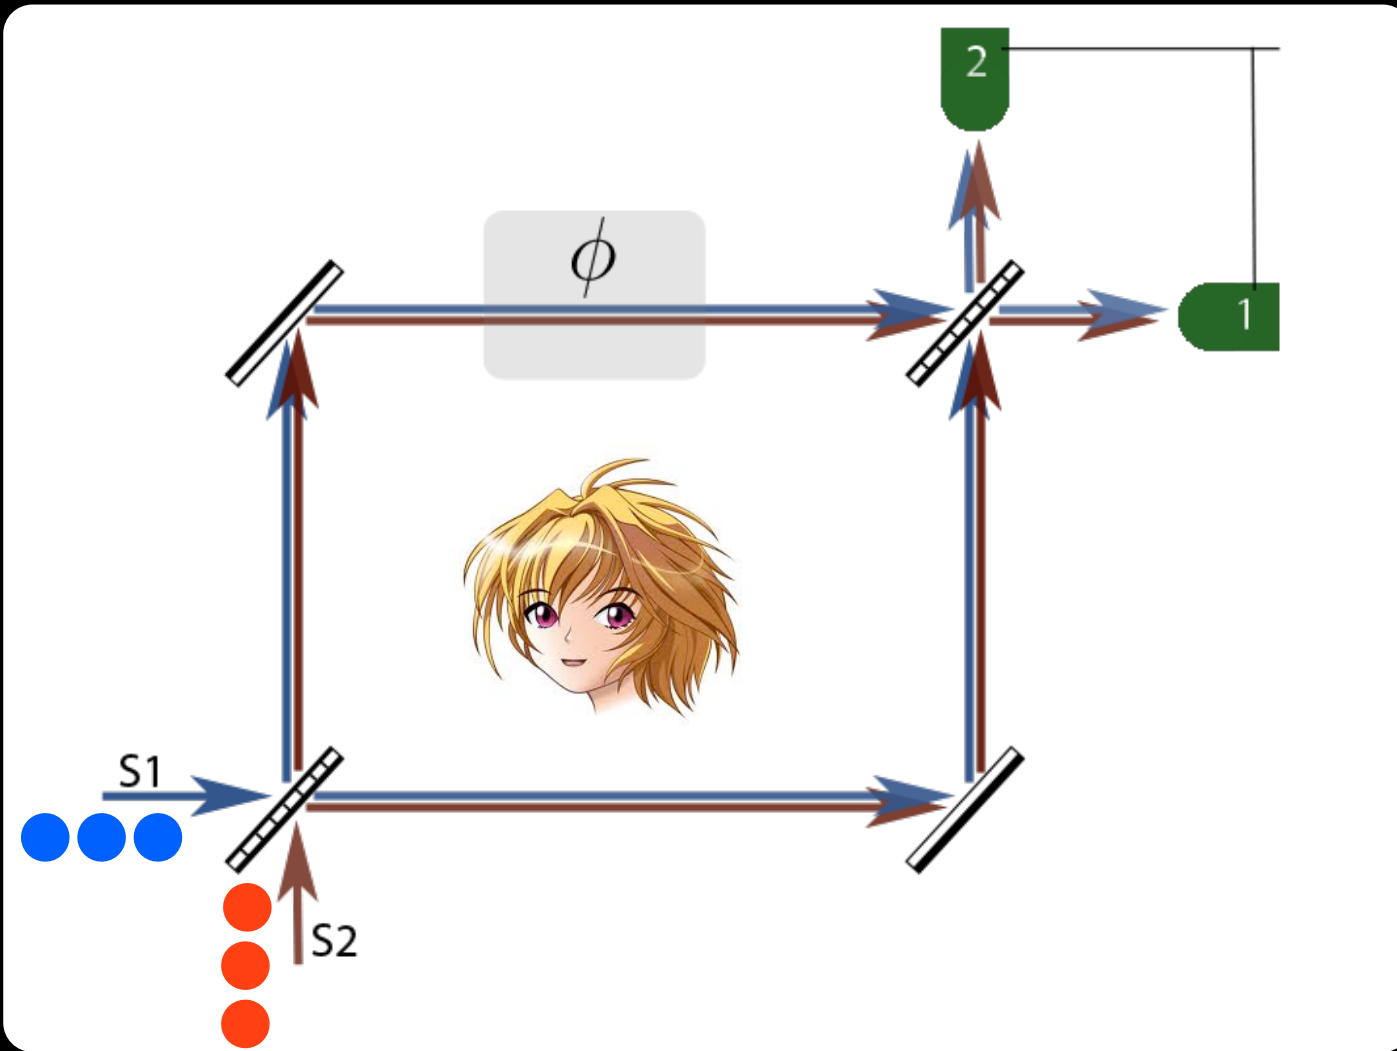

# **Magnetic Field Sensing Beyond the Standard Quantum Limit Using 10-Spin NOON States**

Jonathan A. Jones,<sup>1</sup> Steven D. Karlen,<sup>2</sup> Joseph Fitzsimons,<sup>2,3</sup> Arzhang Ardavan,<sup>1</sup>  
Simon C. Benjamin,<sup>2,4</sup> G. Andrew D. Briggs,<sup>2</sup> John J. L. Morton<sup>1,2\*</sup>

Science

?

(a) Standard ( $S$ )

(a) Standard ( $S$ )

(c) Quantum 1 ( $Q1$ )

(a) Standard ( $S$ )

(b) Classical ( $Cl$ )

(c) Quantum 1 ( $Q1$ )

(a) Standard ( $S$ )

(b) Classical ( $Cl$ )

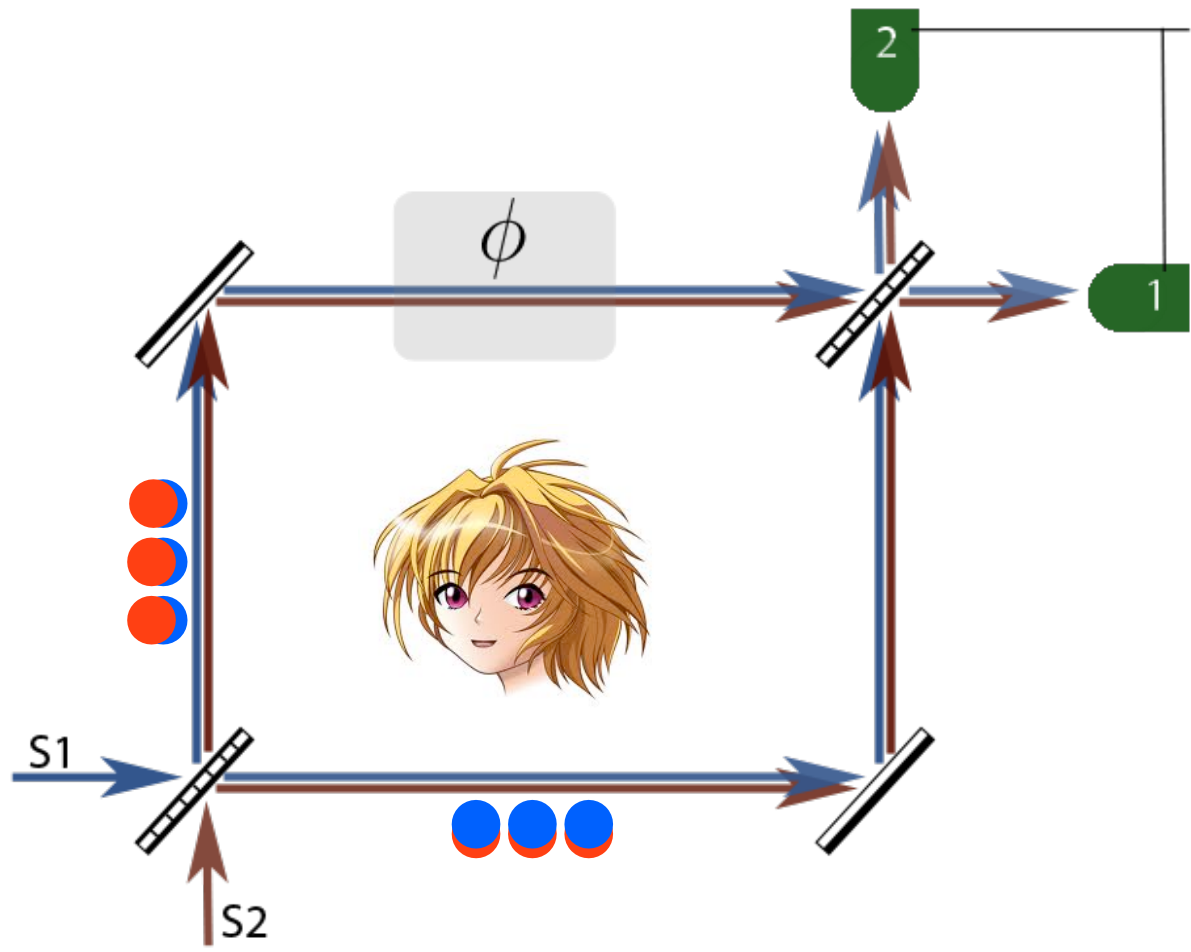

(c) Quantum 1 ( $Q1$ )

(d) Quantum 2 ( $Q2$ )

$\Delta \phi$

is

$$\frac{1}{pN}$$

$$F(\varrho) = 4 \sum_{j>k} \frac{(\eta_j - \eta_k)^2}{\eta_j + \eta_k} |\langle \Psi_j | G | \Psi_k \rangle|^2$$

Quantum enhancement does not suffer from classical noise

It is independent of entanglement

Quantum correlations should be present

Optimality is still unresolved

To appear in PRX (next week).  
arXiv:1003.1174
